The Many-Worlds Interpretation (MWI) of quantum mechanics holds that there are many worlds which exist in parallel at the same space and time as our own. The existence of the other worlds makes it possible to remove randomness and action at a distance from quantum theory and thus from all physics ...

Many-Worlds Interpretation of Quantum Mechanics (Stanford)

Fundamental concepts of quantum mechanics. The principles of quantum physics are based on the 'new' quantum theory of Heisenberg, Schroedinger, Paul Dirac, Max Born and other pioneers.

Quantum Mechanics: Matrix Mechanics and Wave Mechanics

Classical mechanics describes the motion of macroscopic objects, from projectiles to parts of machinery, and astronomical objects, such as spacecraft, planets, stars and galaxies.. If the present state of an object is known it is possible to predict by the laws of classical mechanics how it will move in the future (determinism) and how it has moved in the past (reversibility).

In quantum mechanics, quantum suicide is a thought experiment, originally published independently by Hans Moravec in 1987 and Bruno Marchal in 1988 and independently developed further by Max Tegmark in 1998. It attempts to distinguish between the Copenhagen interpretation of quantum mechanics and the Everett many-worlds interpretation by means of a variation of the Schrödinger's cat thought ...

It has sometimes been suggested that quantum phenomena exhibit a characteristic holism or nonseparability, and that this distinguishes quantum from classical physics.

Holism and Nonseparability in Physics (Stanford)

Last night I went to see a movie which was advertised as being about quantum physics, called "What the Bleep Do We Know?". I was expecting something pretty dumb, but am always interested to see what people think about quantum mechanics.
