A ringed topos is a pair  $(X, R)$ , where  $X$  is a topos and  $R$  is a commutative ring object in  $X$ . Most of the constructions of ringed spaces go through for ringed topoi. The category of  $R$ -module objects in  $X$  is an abelian category with enough injectives. A more useful abelian category is the subcategory of quasi-coherent  $R$ -modules: these are  $R$ -modules that admit a presentation.

The application of quantum mechanics to physical objects such as the electromagnetic field, which are extended in space and time, is known as quantum field theory. In particle physics, quantum field theories form the basis for our understanding of elementary particles, which are modeled as excitations in the fundamental fields.
