### **Introduction to Probability and Statistics Using R**

In this book you will find the basics of probability theory and statistics. In addition, there are several topics that go somewhat beyond the basics but that ought to be present in an introductory course: simulation, the Poisson process, the law of large numbers, and the central limit theorem. Computers have brought many changes in statistics.

probability is covered, students should have taken as a prerequisite two terms of calculus, including an introduction to multiple integrals. In order to cover Chapter 11, which contains material on Markov chains, some knowledge of matrix theory is necessary. The text can also be used in a discrete probability course. The material has been

Solution to Problem 1.14. (a) Each possible outcome has probability  $1/36$ . There are 6 possible outcomes that are doubles, so the probability of doubles is  $6/36 = 1/6$ . (b) The conditioning event (sum is 4 or less) consists of the 6 outcomes  $(1;1);(1;2);(1;3);(2;1);(2;2);(3;1)$ ; 2 of which are doubles, so the conditional probability of doubles is  $2/6 = 1/3$ .
