In topology and mathematics in general, the boundary of a subset  $S$  of a topological space  $X$  is the set of points which can be approached both from  $S$  and from the outside of  $S$ . More precisely, it is the set of points in the closure of  $S$  not belonging to the interior of  $S$ . An element of the boundary of  $S$  is called a boundary point of  $S$ . The term boundary operation refers to finding or taking the ...

A cycling peloton is the main group of cyclists riding closely together to reduce aerodynamic drag and energy expenditure. Previous studies on small groups of in-line drafting cyclists showed reductions down to 70 to 50% the drag of an isolated rider at same speed and these values have also been used for pelotons.
