The Feynman Lectures on Physics is a physics textbook based on some lectures by Richard P. Feynman, a Nobel laureate who has sometimes been called "The Great Explainer". The lectures were presented before undergraduate students at the California Institute of Technology (Caltech), during 1961â€”1963. The book's co-authors are Feynman, Robert B. Leighton, and Matthew Sands.

Here is a set of notes used by Paul Dawkins to teach his Differential Equations course at Lamar University. Included are most of the standard topics in 1st and 2nd order differential equations, Laplace transforms, systems of differential equations, series solutions as well as a brief introduction to boundary value problems, Fourier series and partial differential equations.

NONLINEAR PROGRAMMING $\min_{x \in X} f(x)$, where $f: n \rightarrow \mathbb{R}$ is a continuous (and usually differentiable) function of n variables $x \in X$ and X is a subset of \mathbb{R}^n with a convex character. If $X = \mathbb{R}^n$, the problem is called unconstrained. If f is linear and X is polyhedral, the problem is a linear programming problem. Otherwise it is a nonlinear programming problem

LECTURE SLIDES ON NONLINEAR PROGRAMMING BASED ON LECTURES

Since the Renaissance, every century has seen the solution of more mathematical problems than the century before, and yet many mathematical problems, both major and minor, still remain unsolved. Unsolved problems remain in multiple domains, including physics, computer science, algebra, additive and algebraic number theories, analysis, combinatorics, algebraic, discrete and Euclidean ...
