Optimal control theory deals with the problem of finding a control law for a given system such that a certain optimality criterion is achieved.. It is an extension of the calculus of variations, and is a mathematical optimization method for deriving control policies.The method is largely due to the work of Lev Pontryagin and Richard Bellman in the 1950s, after contributions to calculus of ...

Model predictive control (MPC) is an advanced method of process control that is used to control a process while satisfying a set of constraints. It has been in use in the process industries in chemical plants and oil refineries since the 1980s. In recent years it has also been used in power system balancing models and in power electronics.Model predictive controllers rely on dynamic models of ...

In contrast to nucleic acids and proteins, the biosynthesis of glycans is not directly template-driven but, rather, is a result of a complex network of metabolic and enzymatic reactions that are influenced by many factors, including the genetic profile of the cells in which the glycoconjugates are expressed , epigenetics and the extracellular environment .

Abstract: In this paper, we study the effect of an internal or boundary time-delay on the stabilization of a moving string. The models adopted here are nonlinear and of "Kirchhoff" type.

Vitamin D deficiency is thought to be common in Australia. It is unclear when vitamin D supplementation should be prescribed. Vitamin D assays are inconsistent and inaccurate and there is weak evidence around the level of 25-hydroxyvitamin D (25(OH)D) that is optimal. Evidence of links between ...

Make it a double: A method for the selective α -dehydrogenation of amides in the presence of other carbonyl moieties under mild conditions has been developed. This strategy relies on electrophilic activation coupled to in situ selective selenium-mediated dehydrogenation. Mechanistic experiments suggest formation of an electrophilic Se IV species.
